

Summary

Infrastructure-focused software engineer and B.Sc. Computer Science student (expected graduation Oct. 2026) at TU Berlin with experience in backend systems, network software, and distributed deployments. Building scalable, maintainable systems using Rust, Java, and Go.

Experience

Infrastructure Software Engineer – Dilax Intelcom

Dec 2025 – Present

- Designed and built a [custom application-agnostic reverse-proxy](#) embedded in a Java/Spring Boot app that routes requests to network-isolated sensors via URL-based rules, eliminating the need for 1000+ device-specific configurations while enforcing centralized authentication
- Built and operated deployment automation for 60+ Linux hosts, including SSH-based rollout tooling, improving infrastructure reliability and repeatability across production systems
- Implemented fleet-wide monitoring with Prometheus, Grafana, covering per-service state and proactive alerting

Junior Backend Engineer Internship – Talkpal Inc.

Aug 2024 – Jan 2025

- Improved reliability of email scheduling services by optimizing Redis queues in a NestJS microservices backend while diagnosing and resolving PostgreSQL-related failures across API workflows
- Improved maintainability of 20-30 NestJS API endpoints by refactoring large handlers into smaller service modules with clearer responsibilities and more testable boundaries

Information Technology Support Specialist – Cura Unternehmensgruppe GmbH

Jun 2024 – Nov 2025

- Administered network infrastructure and internal systems, automating recurring IT workflows via scripting

Projects

[HexName.com – Managed DNS platform](#)

- Built a self-service DNS management platform with a web dashboard, REST APIs, Dynamic DNS, and support for 7 DNS record types, enabling users to manage their own subdomains
- Achieved 99.9% annual uptime by building a production DNS platform with a Rust backend, a SvelteKit/Tailwind frontend, NixOS-based deployments, and uptime monitoring
- Architected a highly available authoritative DNS infrastructure using two public PowerDNS servers, DNSSEC-secured zones, and automated zone provisioning
- Engineered PostgreSQL streaming replication to a read-only database to ensure failover and data consistency

[EMBArk – Django-UI for Siemens Energy](#)

- Delivered orchestration features to an open-source Django platform for Siemens Energy, enabling firmware analysis jobs to run across distributed SSH workers

[Self-hosted NixOS infrastructure](#)

- Managed infrastructure declaratively with reproducible deployments across machines, integrating Cloudflare, Netbird/Tailscale mesh VPNs, NAT/CGNAT traversal, ZFS storage, monitoring, and secrets management via sops
- Improved mail deliverability and security by operating a self-hosted mail server with SPF/DKIM/DMARC policies, MTA-STS, email reputation management, and DNS hardening

Education

B.Sc. in Computer Science, Technical University Berlin

Oct 2023 – Oct 2026

Relevant coursework: Software Engineering, Systems Architecture, Testing, Algorithms, Programming Languages

Technical Skills

- Languages:** Rust, Python, Java, Go, C/C++, TypeScript/JavaScript, Bash
- Frameworks:** Spring Boot, Django, NestJS, SvelteKit, Tailwind CSS
- Infrastructure:** Linux, Nix/NixOS, Docker, NGINX, GitHub Actions, PostgreSQL, Grafana, Prometheus

Languages

- English** – C1
- German** – C1
- Georgian** – C2
- Russian** – B2
